# POLICE
CYBERALARM

Helping your business monitor and report the malicious activity you face from the Internet

## What is Police CyberAlarm?

Police CyberAlarm is a free tool to help your business understand and monitor malicious cyber activity.

Police CyberAlarm acts as a "CCTV camera" monitoring the traffic seen by your businesses' connection to the internet. It will detect and provide regular reports of suspected malicious activity, enabling your business to minimise your vulnerabilities.

Police CyberAlarm

How does it work?

Reports
Details of suspicious activity and known vulnerabilities

Vulnerability Scanning
Remote scan for known vulnerabilities collected by the CyberAlarm server and included in the reports sent to members

Targeted and Automated Attacks

External IPs

Member Organisation

Firewall

Web Applications
Websites, SharePoint, Dropbox, etc

Cyber-crime Units
Collected data shared with Police Cybercrime Units and analysed at local, regional and national levels

CyberAlarm Server

CyberAlarm Collector
Receives suspicious activity logs from the firewall/internet gateway

Once you become a Police CyberAlarm member you install a 'CyberAlarm Virtual Server' on your system which will be used to collect and process traffic logs identifying suspicious activity from your firewall/internet gateway.

Police CyberAlarm is a monitoring system and does not interfere with normal network operations. It is a small virtual appliance outside the network and does not delay the traffic through the gateway and is installed with just one-click.

Does it collect any personal data?

No, the data collected by the system does not contain any content of the traffic. The system is designed to protect personal data, trade secrets and intellectual property.

What are the benefits to my business?

REGULAR REPORTING

Detailing potentially malicious/attack activity discovered on your firewall/ internet gateway. You can use these reports for further investigation and to better protect your business.

IDENTIFY YOUR BUSINESS VULNERABILITIES

Scan your businesses website and external IP addresses for known vulnerabilities. These regular reports can help you protect your business from known suspicious activity.

BUSINESS INFORMATION AND INTELLIGENCE

Data is used to provide details on the latest threats discovered, giving your business the ability to update security measures.

HELPING THE POLICE HELP YOU

Data is also used by the police to identify current threats, take enforcement action against the cyber criminals and help your business prepare and better protect itself.

Where do I sign up?

If you would like to become part of Police CyberAlarm or find out more about receiving regular security updates and reports to help you gain a better understanding of current threats, register on our website:
